

Project Initialization and Planning Phase

Date	04 July 2026
Team ID	
Project Name	Comprehensive measure of well-being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Government policymakers and socio-economic analysts need to evaluate global human development trends to distribute regional aid effectively. However, manually calculating these well-being scores is incredibly slow and complex because historical global datasets are massive, disorganized, and full of missing variables. This creates massive delays in strategic planning, leaving a critical need for an automated, real-time predictive tool.

Example:

I am (Customer)	I'm trying to	But	Because	Which makes me feel
 A government policymaker or development analyst.	 Accurately evaluate well-being and project how social investments impact development scores.	 Socio-economic indicators are complex, highly overlapping, and slow to calculate manually.	 Global development statistics involve large, multi-decade datasets that are difficult to interpret instantly.	 Frustrated by slow analytical planning cycles and eager for a real-time predictive solution.

Problem in few words:
Hard to quickly analyze complex development data, causing slow decisions and frustration.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policymaker or development analyst.	Accurately evaluate regional wellbeing and project how social investments impact development scores.	Socio-economic indicators are complex, highly overlapping, and slow to calculate manually.	Global development statistics involve large, multi-decade datasets that are difficult to interpret instantly.	Frustrated by slow analytical planning cycles and eager for a real-time predictive solution.
