Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "We need a faster way to identify regions requiring development aid." "How will an extra year of average schooling impact our global index ranking?" "Let's simulate this policy scenario directly on the application dashboard."	THINKS "Socio-economic indicators are far too complicated to merge and calculate manually." "I hope our healthcare budget reallocations show clear, measurable well-being results." "Is there an easier predictive tool to project national development trends instantly?"
PERSONA NAME <i>(Role / User Type)</i> Government Policymaker / Socio-Economic Analyst	
DOES - Sifts through giant, messy historical spreadsheets (HDI.csv) to track country stats. - Inputs target parameters like Life Expectancy and GNI into an online input form. - Uses a custom Flask web interface to calculate dynamic, data-driven predictions.	FEELS - Overwhelmed by giant, unorganized multi-decade public datasets. - Frustrated by the slow turnaround times of traditional statistical computation. - Optimistic about using trained machine learning models (HDI.pkl) to speed up regional planning.
