

Solution Architecture

Date	4 July 2026
Team ID	
Project Name	Comprehensive measure of well-being
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Renders the clean user interface, providing interactive form inputs for users to submit socio-economic parameters and cleanly view calculated outputs.	HTML5, CSS3, JavaScript, Bootstrap framework
API Gateway	Manages incoming HTTP POST request traffic from the browser form, maps endpoints, and pipes data parameters to the active server module.	Flask routing / middleware layer
Microservices	Acts as the main application backend node that executes analytical workflows and loads data into mathematical regression algorithms for real-time inference.	Python core engine, Scikit-Learn, Pandas, NumPy
Database	Operates as the persistent storage layer, keeping structural historic records intact and fetching pre-trained coefficient weight states securely.	Flat-file structured storage (HDI.csv data sheets and serialized HDI.pkl model file)
